Prices are correct at time of publication (December 2016), however may be subject to change.

DNA testing relies on comparisons of the parties tested to the general population. For example, the test assumes that no one related to the testing father could also be the father. Please notify us if this is not the case for you. DNA relationship testing will yield an informative answer for the analysis of mother-child-father relationships. DNA relationship testing may not always be as informative for other relationship testing combinations.

This will only be evident to the lab after testing.
